

Remote Island Medical Welfare Research Conference

We held "The 9th Remote Island Medical Welfare Conference". The conference is to consider the medical and welfare problems to occur due to declining and aging population on remote islands.

- Date : July 16, 2019
- Place : Kagawa University
- Participants : Saiseikai, Local governments,
Kagawa University

Last fiscal year, we surveyed Ogijima island and Hiroshima island (including Teshima island and Oteshima island). Based on the results, we will survey new remote islands this fiscal year.

Therefore,

- We have selected 4 remote islands by the previous study meeting as a candidate and we actually met with the chairmen of residents' associations to explore the possibility. As a result, we selected to survey Awashima island and Ibukijima island in this fiscal year. Because two islands have highly possibility to be able to survey with cooperation of islanders.
- We have been reviewing the contents of questionnaire for next survey, based on the previous survey.
- In the near future, we will go to Ogijima island and Hiroshima island and report the previous survey results. At that time, we will listen to the opinions of the islanders for reference.
