

# Study meeting about the development of method to prevent discoloration of seaweed.

Kagawa Prefectural Fisheries Experiment Station, Kagawa Prefectural Fisheries Division and Seto Inland Sea Regional Research Center in Kagawa University have been developing for the prevention method of seaweed discoloration.

This study meeting was to evaluate about Last year's field test results and to plan about this year's field test. So far, we have confirmed that seaweed skirt covering the marine farm was effective in dull-current inside bay. So, now, following in the dull-current, we have been developing the method for prevention of seaweed discoloration in rapid-current outside bay.
