

Tideland Creature Observation Class was held.

On Sunday, June 20, 2021 at the Shinkawa estuary tideland in Takamatsu City and Aji Marine Station, we held a nature observation experience class "Takamatsu Tideland Creature Observation class".

This observation class is an environmental learning course for citizens sponsored by the Takamatsu City Environment Bureau / Environmental Conservation Promotion Division, and was held for elementary and junior high school students and their parents.

On the class, Professor Ichimi and University students served the class as lecturers, and they learned what kind of creatures live in what kind of place on the tideland through collecting and observing.

After that, at the Aji Marine Station, they looked up the names of the creatures they brought back and conducted small experiments using clams and Japanese mud shrimp. Participants enjoyed a day on the tideland despite during the rainy season.

Shinkawa estuary tideland

what kind of creatures live?

Searching for fry in seaweed

Looking up the names of the creatures

Hiding into the agar like this

Observation of small creatures with a microscope
